

### REMARKS

The Examiner has objected to the Drawings under 37 CFR 1.83(a), as failing to show the error detection and correction means, the symbol decision means, and the digital and analog hardware of the transmitter and receiver. Applicant now submits a replacement drawing, indicating where the items claimed would be found. The new item reference numbers are #'s 23 indicating the symbol decision means, which is part of the decoder, and 25, error detection and correction means, which is also found within the decoder. No new matter has been added.

All reference to analog equipment has been cancelled, following Examiner's observation that "one skilled in the art would recognize that the system operates in a digital hardware". It is taken, then, that the system pertains to digital hardware, so reference to digital hardware, being redundant, would not be required, and has therefore been removed from the claims.

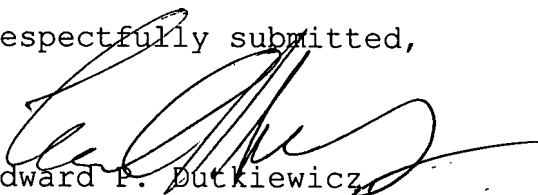

The Examiner has objected to Claims 1 - 11 for not defining "m" as used in the context of the Claim. Language has been added to the claims that defines "m" as being an integer.

Applicant has cancelled Claims 2, 7, 9, and 11.

Applicant submits that the replacement drawings, along with the amended claims, are fully responsive to each of the Examiner's objections and rejections. The Applicant, therefore,

requests that the Examiner now withdraw the rejections, and pass the application forward to issue.

Respectfully submitted,

A handwritten signature in black ink, appearing to read 'Edward P. Dutkiewicz', is written over the typed name.
